No Magic MagicDraw Training Courses, Workshops and Consultancy

MagicDraw Can Be Used On All CRaG Systems Training Courses

As a No Magic Training Partner, CRaG Systems provides workshops and training courses in the use of MagicDraw for model-driven software development, business process management and systems engineering. All of the courses in the CRaG Systems Course Catalogue can use MagicDraw hands-on for the exercises, or teach the use of MagicDraw directly. Public BPMN and UML Training Courses in London can use MagicDraw to teach the use of BPMN and UML to individuals while On-Site Courses allow you to train the whole team to use MagicDraw for a wide range of different purposes.

Should the content of any MagicDraw training course or workshop not fit your exact requirements, then CRaG Systems can create a custom training course or workshop for you.

KickStart Model Development Workshops with MagicDraw

Even with formal training in the modelling language it can be daunting to have to start a model of your own business or system in a sophisticated modelling tool like MagicDraw. Having an experienced consultant with you for the first few days as you develop the initial shape of your model can be very reassuring and make sure that your project gets off to a flying start.

With CRaG Systems KickStart Model Development Workshops you have your consultant on-site guiding you through each step of the initial model development in a facilitated workshop environment. The consultant will teach you how to use MagicDraw to develop the model and to maintain it in a multi-user change-managed environment. Get a firm quotation for a KickStart Model Development Workshop as part of your training quote or separately.

Some of the MagicDraw specific skills students can learn on a course which teaches the use of MagicDraw:

- The basics and the necessary detail of the use of MagicDraw
- How to generate and maintain documents from the different parts of the model
- How to link the model with externally maintained documents and data
- How to model requirements and make them traceable all the way through the model to code
- How to model tests and relate them to requirements, components and code
- How to generate frame code and keep the design and code models synchronised
- How to integrate MagicDraw with external coding environments for round-trip engineering
- How to use the tool in a multi-user environment integrated with a version control system
- How to use the project management capabilities available within MagicDraw
Should the content of any MagicDraw workshop training course not fit your exact requirements, then CRaG Systems can create a custom course for you. Please either email or call us to discuss your particular needs.
