Sparx Systems Enterprise Architect (EA) Training Courses, Workshops and Consultancy

Enterprise Architect Can Be Used On All CRaG Systems Training Courses and Workshops

As a Sparx Systems Training Partner since 2002, CRaG Systems provides workshops and training courses in the use of Enterprise Architect for model-driven software development, business process management and systems engineering. All of the courses in the CRaG Systems Course Catalogue use Enterprise Architect hands-on for the exercises, or teach the use of Enterprise Architect directly.

Should the content of any Enterprise Architect training course or workshop not fit your exact requirements, then CRaG Systems can create a custom training course or workshop for you.

KickStart Model Development Workshops with Enterprise Architect

Even with formal training in the modelling language it can be daunting to have to start a model of your own business or system in a sophisticated modelling tool like Enterprise Architect. Having an experienced consultant with you for the first few days as you develop the initial shape of your model can be very reassuring and make sure that your project gets off to a flying start.

With CRaG Systems KickStart Model Development Workshops you have your consultant on-site guiding you through each step of the initial model development in a facilitated workshop environment. The consultant will teach you how to use Enterprise Architect to develop the model and to maintain it in a multi-user change-managed environment. Get a firm quotation for a KickStart Model Development Workshop as part of your training quote or separately.

Some of the EA specific skills students can learn on a course which uses Enterprise Architect:

- The basics and the necessary detail of the use of Enterprise Architect
- How to generate and maintain documents from the different parts of the model
- How to link the model with externally maintained documents and data
- How to model requirements and make them traceable all the way through the model to code
- How to model tests and relate them to requirements, components and code
- How to generate frame code and keep the design and code models synchronised
- How to integrate the Enterprise Architect with external coding environments for round-trip engineering
- How to use the tool in a multi-user environment integrated with a version control system
- How to use the project management capabilities available within Enterprise Architect

Each of these training courses is available as an On-Site (In-House) Workshop.

Enterprise Architect Hands-On Workshops

An Introduction to Enterprise Architect Hands-On Workshop - 1 Day

An Introduction to UML with Enterprise Architect Workshop Course - 2 Days

UML with Enterprise Architect KickStart Model Development Workshop - N Days

BPMN with Enterprise Architect KickStart Model Development Workshop - N Days

BPMN and UML with Enterprise Architect KickStart Model Development Workshop - N Days

ArchiMate with Enterprise Architect KickStart Model Development Workshop - N Days

MODAF with Enterprise Architect KickStart Model Development Workshop - N Days

Embedded C/C++ with UML and Enterprise Architect Hands-On Workshop Training Course - 2-5 Days

Real-Time UML with Enterprise Architect KickStart Model Development Workshop - N Days

MBSE with SysML and Enterprise Architect Hands-On Workshop Training Course - 4 Days

SysML with Enterprise Architect KickStart Model Development Workshop - N Days

SysML and Real-time UML with Enterprise Architect KickStart Model Development Workshop - N Days

Should the content of any Enterprise Architect workshop training course not fit your exact requirements, then CRaG Systems can create a custom course for you. Please either email or call us to discuss your particular needs.
